

The Faculty of Metallurgy has achieved successful teacher exchange with Naravoslovnotehniška fakulteta Ljubljana (prof. Medved, prof. Mrvar), Strojniška fakulteta Maribor (prof. Anžel), Hutnickska fakulteta Košice (prof. Tomašek, prof. Nižnik) and Linneuniversitetet Växjö, Sweden (Dugić, PhD). Guest teachers' lectures proved to be highly interesting, educational and most of all inspiring in terms of initiating new cooperative programs. Students see these lectures as significant expansion of teaching content and knowledge on metallurgy in modern technologies. Moreover, in the said lectures students initiate conversation on possibilities of study visits to the international institution.

In the last several years, the Faculty of Metallurgy has initiated promoting the possibilities of participating in studies at international colleges and practical work for students in international companies. These activities resulted in two undergraduate students went to study visit in Ljubljana (one semester, Naravoslovnotehniška fakulteta Oddelek za metalurgijo in materiale) and one student went to company Kovis d.o.o. Štore to conduct the practical work.

The students at the Faculty of Metallurgy may spend a part of their studies abroad. So far they have used the institutionalized support within the framework of ERASMUS program. In order to simplify the realization of studies/practical work of its students in foreign countries, the Faculty of Metallurgy introduced a coordinator for international cooperation to its organizational structure, who is engaged in preparation of students' applications, ensuring dormitory accommodation, gathering approval of teachers on recognition of ECTS points for successfully completed courses upon return to mother faculty, etc.
